

BEDİRHAN BAYRAM

Computer Engineering Student

Sakarya, Türkiye | +90 530 958 02 61 | bedirhanbayram.bb@gmail.com

PROFILE

Final-year Computer Engineering student with hands-on experience developing computer-vision prototypes involving facial recognition, edge computing and Raspberry Pi. Built systems that reached real-world beta testing at Serdivan Municipality. Interested in software engineering, Python/C/C++ development and technically challenging environments.

EDUCATION

Sakarya University — B.Sc. Computer Engineering
September 2022 - Expected June 2028 | Sakarya, Türkiye

TECHNICAL SKILLS

Programming: Python, C++, C

Technologies: OpenCV, Pandas, OpenPyXL, Raspberry Pi, RTSP, YOLOv5, TensorFlow/Keras

Platforms: Linux, Windows

PROJECTS

YAS/PAS — Facial Recognition Personnel Attendance System | *Python · OpenCV · face_recognition · Pandas · OpenPyXL*

Developed an offline facial-recognition attendance system for automated personnel identification and entry/exit tracking. Implemented working-time and overtime calculation, absence detection, and automated CSV/Excel reporting. The system was beta-tested in a real-world environment at Serdivan Municipality.

SAYAS — Computer Vision Visitor Counting System | *Python · Computer Vision · Raspberry Pi · RTSP*

Developed a computer-vision prototype for counting unique visitors while reducing duplicate counts from returning individuals. Designed for edge deployment using Raspberry Pi and IP-camera streams. The system reached beta testing at Serdivan Municipality before development was discontinued.

EKAS — AI-Based Seat Belt Detection Prototype | *Python · OpenCV · YOLOv5 · TensorFlow/Keras · Raspberry Pi*

Integrated and customized existing open-source computer-vision components to create a real-time seat-belt detection prototype. Combined object detection and image classification with audible warnings and Raspberry Pi GPIO output.
